

Jeels Patel

📍 Toronto, ON ✉ jeelsspatel1512@gmail.com 🌐 jeels-patel 🎧 jeels1512 🔗 jeelsspatel.vercel.app

Summary

Cybersecurity student at Seneca Polytechnic with a full-stack development background pivoting into offensive security and DevSecOps. Built a containerized Suricata + ELK intrusion detection pipeline; ranked **Top 20% on TryHackMe** with 33 completed rooms. Targeting Junior DevSecOps, Application Security, SOC Analyst, and Vulnerability Assessment roles in the GTA.

Technical Skills

Offensive Security: OWASP Top 10, Web/Mobile/AD Pentesting, Burp Suite, Nmap, Metasploit, Wireshark, BloodHound, Kali Linux

Detection & SIEM: Suricata IDS, ELK Stack (Elasticsearch, Kibana, Filebeat), MITRE ATT&CK, log analysis, custom rule writing

DevSecOps & Cloud: CI/CD security, GitHub Actions, SAST, DAST, Docker, Docker Compose, Linux hardening, AWS basics

Programming & Web: JavaScript (Node.js, React.js), Python, Java, Bash, Express.js, REST APIs, JWT, OAuth, MongoDB

Tools: Git, GitHub, VS Code, Postman, VirtualBox/VMware, TryHackMe, HackTheBox

Education

Seneca Polytechnic, Graduate Certificate, Cybersecurity & Threat Management Toronto, ON
 • Coursework: threat detection, vulnerability analysis, incident response, network security, intrusion detection, ethical hacking. Jan 2026 – present

Georgian College, Diploma, Computer Programming Toronto, ON
May 2024 – Dec 2025

Certifications

- **Google Cybersecurity Professional Certificate** — Coursera
- **Cisco — Foundations of Cybersecurity** — verified on Credly
- **TryHackMe** — *Top 20% global rank · 33 rooms · 8 badges* — tryhackme.com/p/jeelsspatel1512
- **TryHackMe — DevSecOps Learning Path** (*in progress*)
- **CompTIA Security+ (SY0-701)** (*in progress, target 2026*)

Experience

STEM Montessori Academy of Canada, Web Developer Intern (Co-op) Remote — Toronto, ON
 • Built and maintained secure WordPress applications supporting STEM education and outreach programs. May 2025 – Aug 2025
 • Implemented authentication and access controls; reviewed third-party plugins and themes for injection and XSS risks before deployment. 4 months
 • Identified and remediated vulnerabilities during development, including misconfigured permissions and unsanitized form inputs.
 • Delivered responsive, accessibility-friendly layouts using OceanWP and Elementor with secure media-handling practices.

Projects

IoT Network Detection Lab — ELK + Suricata + MQTT

github.com/jeels1512/cyt160-lab4

- Built a containerized intrusion detection pipeline using Suricata IDS, Filebeat, Elasticsearch, and Kibana, orchestrated with Docker Compose.
- Wrote custom Suricata signatures and validated detections against simulated attack traffic captured in eve.json.
- Designed Kibana dashboards for alert triage — source IPs, signature volume, and incident timelines.
- Hardened a Mosquitto MQTT broker with TLS and analyzed plaintext vs encrypted IoT traffic via pcap.

Security Portfolio — OS-Themed SPA

jeelspatel.vercel.app

- Designed and built a macOS-style single-page security portfolio with an interactive terminal emulator, glassmorphism UI, and responsive layouts for mobile and Apple Watch.
- Implemented client-side input sanitization and security headers to mitigate XSS in the terminal interface.
- Stack: React, Vanilla JS, custom CSS, Vercel.

Uber Clone — Secure MERN Ride-Booking App

github.com/jeels1512/Uber-clone

- Designed JWT-based authentication with refresh-token rotation and role-based access control for rider, driver, and admin flows.
- Built secure REST APIs with input validation, rate limiting, and parameterized queries to mitigate injection.
- Stack: MongoDB, Express.js, React, Node.js.
