Summary

Cybersecurity-focused developer who builds detection systems and secure web applications. Recently completed the **TryHackMe DevSecOps learning path** (26 hours) and shipped a containerized Suricata + ELK intrusion detection pipeline. Ranked **Top 20% on TryHackMe** with 33 rooms and 8 badges completed. Open to Junior DevSecOps, Application Security, and SOC Analyst roles in the GTA.

Technical Skills

DevSecOps & Secure SDLC: CI/CD security, GitHub Actions, GitLab CI, Jenkins security, SAST, DAST, IAST, SCA, secrets management, dependency scanning, container scanning, infrastructure as code (IaC) security, threat modeling, shift-left security

Offensive Security: Penetration Testing, Web Application Security, Mobile Application Security, Active Directory Assessment, OWASP Top 10, Burp Suite, Nmap, Metasploit, Wireshark, BloodHound, Kali Linux

Detection & SIEM: Suricata IDS, ELK Stack (Elasticsearch, Kibana, Filebeat), MITRE ATT&CK, log analysis, custom rule writing, incident triage

Cloud & Containers: Docker, Docker Compose, container hardening, Kubernetes security basics, AWS (Cloud Practitioner level), Linux hardening, Bash scripting

Programming & Web: JavaScript (Node.js, React.js), Python, Java, Bash, Express.js, REST APIs, JWT, OAuth, MongoDB, WordPress

Hands-On Practice: TryHackMe — Top 20% · 33 rooms · 8 badges — tryhackme.com/p/jeelsspatel1512

Education

Seneca Polytechnic, Graduate Certificate, Cybersecurity & Threat Management
 Toronto, ON
 Jan 2026 – present

Georgian College, Diploma, Computer Programming
 Toronto, ON
 May 2024 – Dec 2025

Certifications

- **TryHackMe — DevSecOps Learning Path** — Completed Jun 2026 (26h 45m) — Credential ID: THM-HJUCPEJADT — [verify](#)
- **Google Cybersecurity Professional Certificate** — Coursera
- **Cisco — Introduction to Cybersecurity** — verified on Credly
- **CompTIA Security+ (SY0-701)** — *in progress, target Aug 2026*
- **TryHackMe — Jr Penetration Tester Path** — *in progress*

Experience

- STEM Montessori Academy of Canada**, Web Developer Intern (Co-op) Remote — Toronto, ON
- Built and maintained secure WordPress applications supporting STEM education and outreach programs across 8+ content-driven sections. May 2025 – Aug 2025
 - Implemented authentication, access controls, and input sanitization; reviewed third-party plugins and themes for injection and XSS risks before production deployment. 4 months
 - Identified and remediated 5+ vulnerabilities during development, including misconfigured permissions, plugin risks, and unsanitized form inputs.

Projects

IoT Network Detection Lab — ELK + Suricata + MQTT

github.com/jeels1512/cyt160-lab4

- Built a containerized intrusion detection pipeline using Suricata IDS, Filebeat, Elasticsearch, and Kibana, orchestrated with Docker Compose.
- Wrote custom Suricata signatures and validated detections against simulated attack traffic captured in eve.json.
- Designed Kibana dashboards for alert triage — source IPs, signature volume, and incident timelines — and hardened a Mosquitto MQTT broker with TLS.

Security Portfolio — OS-Themed SPA

jeelspatel.vercel.app

- Designed and built a macOS-style single-page security portfolio with an interactive terminal emulator, glassmorphism UI, and responsive layouts for mobile and Apple Watch.
- Implemented client-side input sanitization and security headers to mitigate XSS in the terminal interface. Stack: React, Vanilla JS, custom CSS, Vercel.

Uber Clone — Secure MERN Ride-Booking App

github.com/jeels1512/Uber-clone

- Designed JWT-based authentication with refresh-token rotation and role-based access control for rider, driver, and admin flows.
- Built secure REST APIs with input validation, rate limiting, and parameterized queries to mitigate injection. Stack: MongoDB, Express.js, React, Node.js.
